The application has been amended as follows:

Pursuant to MPEP 606.01, the title has been changed to read:

-- APPARATUS AND METHOD FOR MANAGING ADDRESS BOOK IN PORTABLE WIRELESS TERMINAL HAVING A RADIO FREQUENCY IDENTIFICATION (RFID) RECOGNITION SECTION--

AMENDMENTS TO THE CLAIMS:

Please amend the claims as follows.

CLAIM 7. (Currently Amended) An apparatus for managing an address book in a portable wireless terminal, the apparatus comprising:
a data conversion section;
an RFID recognition section external to the terminal for receiving information

transmitted from an RFID chip after transmission of an electric wave, storing and reading the received information, and structuring address book data using the read information so as to be suitable for the address book, wherein the data conversion section is included in the RFID recognition section;

a display section for displaying data for management of the address book;

a user command input section for inputting a command for address book management by a user;

an address book storage section for storing information; and

a control section for controlling an operation of the RFID recognition section, so as to transmit converted data to the address book storage section according to a user command, thereby storing the data [.] wherein the RFID recognition section comprises an electric wave control section for controlling an electric wave transmission section to transmit the electric wave having a frequency and an intensity corresponding to the RFID chip.

CLAIM 10. (Currently Amended) A method for managing an address book in a portable wireless terminal, the method comprising the steps of:

- a) controlling an electric wave transmission section to transmit an electric wave having a frequency and an intensity corresponding to the RFID chip and transmitting [an] the electric wave for an RFID recognition to an RFID chip;
- b) determining whether RFID information, which is transmitted from the RFID chip, is received after the electric wave is transmitted;
- c) storing received information in a memory when received RFID information is related to an address book registration;
- d) converting the data corresponding to the identifiers into data suitable for the address book of a corresponding portable terminal;
- e) displaying the converted data in a display section of the terminal to ask a user whether [or not] the converted data are data to be registered in the address book; and
- f) storing the converted data in an address book storage section when the user wants to

Art Unit: 2182

register the converted data.

CLAIM 14. (Currently Amended) An apparatus for managing an address book in a portable wireless terminal, the apparatus comprising:

- a display section for displaying data for management of an address book;
- a user command input section for inputting a command for address book management by a user;
- an address book storage section for storing information;
- a portable wireless terminal including a control section for receiving data from an external device and enabling the received data to be stored in the address book storage section according to the user's request based on identifiers extracted from the received data;
- an RFID recognition section for receiving information transmitted from an RFID chip receiving an electric wave after transmission of the electric wave, and storing and reading received information, wherein the RFID recognition section comprises an electric wave control section for controlling an electric wave transmission section to transmit the electric wave having a frequency and an intensity corresponding to the RFID chip; and
- a data conversion section for structuring address book data using the information read by the RFID recognition section so as to be suitable for the address book of the portable wireless terminal, thereby transmitting the converted information to the control section of the portable wireless terminal.

II. ALLOWABLE SUBJECT MATTER

The following is an examiner's statement of reasons for allowance based on the previously cited prior art, and the Examiner's Amendment agreed upon by Applicant's Attorney; therein, claims 1, 7, 10, and 14 include allowable subject matter and considered pertinent to the applicant's disclosure, taken individually or in combination, the prior art of record does not teach or suggest the claimed limitations having "An apparatus for managing an address book in a portable wireless terminal, the apparatus comprising: a radio frequency identification (RFID) recognition section for receiving information transmitted from an RFID chip after transmission of an electric wave, storing received information and reading identifiers and data corresponding to the identifiers from received information;

a data conversion section for converting the data corresponding to the identifiers into data suitable for the address book;

a display section for displaying data for management of the address book;

a user command input section for inputting a command for address book management by a user;

an address book storage section for storing the converted data; and a control section for controlling an operation of the RFID recognition section, so as to transmit the converted data to the address book storage section thereby storing the converted data in a field of the address book storage which corresponds to the identifiers wherein the RFID recognition section comprises an electric wave control section for controlling an electric wave transmission section to transmit the electric wave having a frequency and an

Art Unit: 2182

intensity corresponding; to the RFID chip." The remaining claims 2-5, 8, 9, 11-13, 15, and 16 are allowed by virtue of their dependencies on the independent claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance.
